

Agile Product Management - Certified SAFe® Agile Product Manager

In SAFe®, product managers play a key role in the trio of leaders, including architects and the Release Train Engineer. These people work together to lead the Agile Release Trains (ARTs) in continuously delivering value.

In the Agile Product Management course, you'll explore how to use design thinking to put your customers at the center and create products that are desirable, feasible, and sustainable. You'll discover how continuous exploration fuels innovation. You'll get the guidance and tools you need to work effectively in remote environments with distributed teams. And you'll explore how to define a vision, strategy, and roadmap to satisfy existing customers and attract new ones.

Attendees learn:

- How to create innovation in the value stream
- How to use design thinking to achieve desirable, feasible, and sustainable products
- How to use product strategy to set clarity and direction for the ART
- How to develop and evolve short-term roadmaps that result in long-term value
